1. Drag a field to the view. The first field comes from will become the primary data source.
2. Switch to another data source and make sure there is a relationship to the primary data source.
3. Drag a field into the view from the secondary data source.
4. Similar like left join will happen,
    a) If there multiple corresponding values in the rows in the right table, as indicated by the asterisk (*) in the results.
    b) If a row in the left table does not have a corresponding row match in the right table, as indicated by the Null value in the results.

Suppose in the following tables the linking fields are User ID and Patron ID.

User ID	District	Level	Type
1	2	3	G
2	3	4	J
4	5	6	M
1	2	3	W

Branch	Patron ID	District	Level
A001	1	2	3
B001	2	3	4
C001	1	2	3

User ID	District	Level	Branch	Type
1	2	3	*	G
2	3	4	B001	J
4	5	6	Null	M
1	2	3	*	W
